## DETAILED ACTION

### *1. Election/Restriction*

A. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a chimeric peptide in which the opioid binding moiety is a mu opioid receptor agonist, and a pharmaceutical composition, classified in class 530, subclass 300.
- II. Claims 1-17, drawn to a chimeric peptide in which the opioid binding moiety is a delta opioid receptor agonist, and a pharmaceutical composition, classified in class 530, subclass 300.
- III. Claims 1-17, drawn to a chimeric peptide in which the opioid binding moiety is a kappa opioid receptor agonist, and a pharmaceutical composition, classified in class 530, subclass 300.
- IV. Claims 18-23, drawn to a method of treating pain in a mammal, classified in class 514, subclass 2.

B. The inventions are distinct, each from each other because of the following reasons:

Inventions I-III are independent and distinct, each from each other, because they are products which possess characteristic differences in structure and function and each has an independent utility that is distinct for each invention which cannot be exchanged. These SEQ ID NOs encode 42, patentably distinct proteins.

Inventions IV and I-III are related as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product, or (2) the product as claimed can be

Art Unit: 1647

used in a materially different process of using that product MPEP § 806.05(h). In the instant case the protein moieties can be used as antigen for antibody production.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter as defined by MPEP § 808.02, the Examiner has *prima facie* shown a serious burden of search (see MPEP § 803). Therefore, an initial requirement of restriction for examination purposes as indicated is proper.

In addition, this application contains claims directed to the following patentably distinct species of the claimed invention: Group I contains 11 distinct species of mu opioid receptor agonists (SEQ ID NO:1-11). Group II contains 6 species of delta opioid receptor agonists (SEQ ID NO:12-17). Group III contains 3 species of kappa opioid receptor agonists (SEQ ID NO:18-20). SEQ ID NO:44 is also claimed as being an opioid receptor binding moiety. Though it is not clear as to which Group SEQ ID NO belongs (either a mu, delta, or kappa opioid moiety), this SEQ ID NO is still treated as are SEQ ID NO:1-20 and is included in the species election.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. In addition to choosing an either a mu, delta, or kappa opioid receptor moiety from Groups I-III, Applicants also need to select one nociceptive receptor binding moiety of SEQ ID NO:21-41. Currently, 1-8 and 13-17 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1647

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

C. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR § 1.48(b) and by the fee required under 37 CFR § 1.17 (h).

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth on the attached Notice to Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.

Applicant is given ONE MONTH, or THIRTY DAYS, whichever is longer, from the mailing date of this letter within which to comply with the sequence rules, 37 CFR 1.821 – 1.825. Failure to comply with these requirements will result in ABANDONMENT of the application under 37 CFR 1.821(g). Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a). In no case may an applicant extend the period for reply beyond the SIX MONTH statutory period. Direct the reply to the undersigned. Applicant is requested to return a copy of the attached CRF Diskette Problem Report with the reply.
